

Micai is the first
AI-powered,
crypto-wealth
management platform
and security token
marketplace built on the
blockchain.

Our Mission

Our mission is to unlock the more than \$60,000,000,000,000 USD (\$60T) in traditional assets held by high net worth individuals (or HNWI) and move it into crypto. HNWI now only hold less than one-hundredth of a percent of their wealth in crypto. Traditionally, HNWIs are always the first big movers into a new asset class. We believe crypto is no different, and Micai will be the main platform where HNWIs move into crypto.

Our Technology

Powered by AI and built on the blockchain, Micai provides HNWIs with a full suite of safe, KYC-compliant solutions for accessing crypto. Turn traditional or illiquid assets — real estate, farmland, art, chateau, VC/PE, hedge fund, bonds, etc — into liquid digital assets through tokenization. Buy and sell digital assets on our security token marketplace. Even borrow crypto against **existing** assets.
